<b>10. Key to "Bitstream" Fonts</b> (Bitstream Font Names and Linotype Font Names)	56

## 1. Introduction

The folder <http://www.sanskritweb.net/cdrfonts> documents the entire CorelDraw font collection. Roughly 1200 Corel fonts are described by 750 PDF files. In addition, many overview PDF files on CorelDraw and Bitstream fonts are downloadable at the folder <http://www.sanskritweb.net/forgers>.

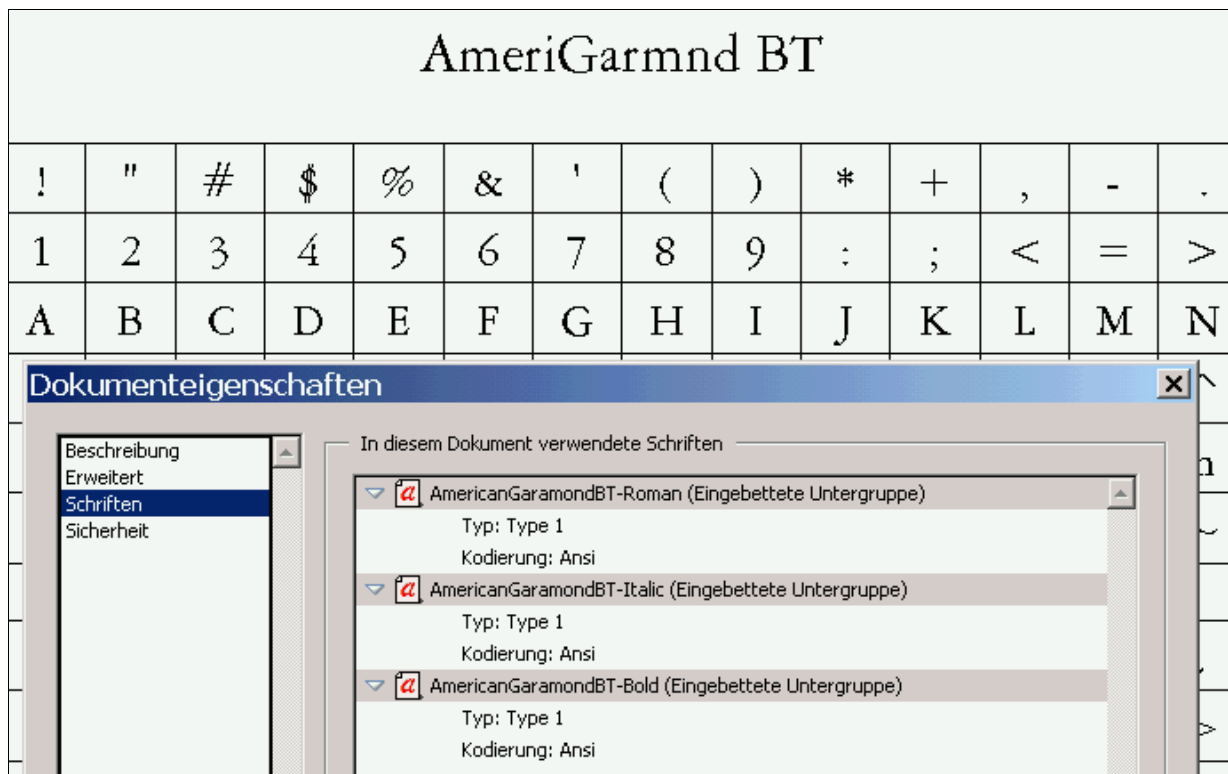

The **Main List** contains 993 fonts, i.e. 862 Bitstream fonts of CorelDraw 12 plus 131 non-Bitstream fonts of CorelDraw 9, which are no longer included with the latest release 12 of CorelDraw 2004.

1. The **Bitstream fonts** are recognizable by the suffix **BT**, e.g. „Aachen\_BT.pdf“ as PDF file name and „Aachen BT“ as font menu name. All 862 Bitstream fonts are completely documented. These fonts feature the entire ANSI character set (Western Europe, Latin 1, 1252 Code Page) and are included in both CorelDraw 9 and CorelDraw 12. But CorelDraw 9 contains 21 additional Bitstream fonts not contained in CorelDraw 12. These 21 additional Bitstream fonts are not described in the Main List, but instead in **Addendum 1**.
2. For **non-Bitstream fonts**, special suffixes were used in the names of the PDF files: **U** = URW, **L** = Letraset, **C** = CorelCorp. CorelDraw 9 includes many non-Bitstream fonts no longer included in CorelDraw 12. Of the non-Bitstream fonts, 131 fonts are described in the Main List: All fonts by URW (featuring the complete ANSI character set) and many fonts by Corelcorp. The 45 remaining fonts, e.g. by Letraset with defective charset, are listed in the **Addendum 2**.
3. CorelDraw also contains 65 **symbol fonts** (pi fonts), which are described in the **Addendum 3**.
4. There are 33 extra Bitstream **Unicode fonts** complying with Windows Glyph List 95 (WGL 95), described in **Addendum 4**. These fonts are **TrueType fonts**, not PostScript Type 1 fonts, and these fonts include the additional font „Chianti“ not available as plain PostScript Type 1 font.

For creating the 750 PDF files, CorelDraw PostScript Type 1 fonts were used for making PDF files. The file names of these PDF files are identical with the font menu names with this exception: Spaces are replaced by underscore, e.g. „AdLib BT“ (font menu name), „AdLib\_BT.pdf“ (PDF file).

**Note:** The WGL 95 Unicode fonts are provided with the prefix „95“, e.g. „95\_AdLib\_BT.pdf“.

Most font menu names, as they are seen in „Word for Windows“ and other Windows applications, are abbreviated, e.g. „AmeriGarmnd BT“ (font menu name) instead of „American Garamond BT“. The full internal PostScript and PDF font style names are seen in the Acrobat Reader menu, e.g.:

**Note:** If a family includes all 4 styles: Roman, Italic, Bold, Bold Italic, then **Bold Italic is not shown** in the PDF file, which always comprises one page only. The list below shows, if „bold italic“ exists. The „bold italic“ style was excluded, since it is never required for identifying an unknown typeface. Yet, the complete 7-bit ASCII character set of Roman, Italic, Bold is required for font identification, so all PDF files contain this charset, and in addition a few lines of text as typesetting specimens.

In Germany, **CorelDraw 9** of 1999 presently retails at 29.00 Euro. This old version comprises all fonts listed below except 31 fonts listed in <http://www.sanskritweb.net/forgers/corel12.pdf>, page 2. Note that most PS fonts of CorelDraw 9 include the Euro sign mapped to the currency symbol, while the fonts of **CorelDraw 8** retailing at 19.00 Euro in Germany do not contain the Euro signs. The new **CorelDraw12** of 2004 is much more expensive. Besides, it does not include the fonts by URW, Letraset and Corelcorp listed below. If you need only the fonts, CorelDraw 9 is the best bet.

If you find a font that you like or that seems to suit your needs, you may wish to compare this font with similar fonts. For this purpose, the font families are sorted by the Bitstream classification. E.g. if you like the font „American Garamond“, then locate this font in the Bitstream classification list, and you will see that „American Garamond“ is classified as belonging to the „Aldine“ font group comprising other similar fonts, e.g. „Classical Garamond“, „Elegant Garamond“, etc.

For the documentation of the fonts of recent Corel versions, e.g. of CorelDraw 13 (= Corel X3), see the 36-page document <http://www.sanskritweb.net/forgers/corel13.pdf>. See also the 23-page documentation of Corel Draw X4 fonts (<http://www.sanskritweb.net/forgers/corel14.pdf>).

Ulrich Stiehl, Heidelberg, 3-May-2005 and 30-July-2010

**Note:** All PDF documents of my website <http://www.sanskritweb.net/cdrfonts> are copyright by Ulrich Stiehl, Heidelberg, and must not be offered for download elsewhere on the web.

### Western Europe Latin 1 Character Set (e.g. Swiss 721)

(white = ASCII character set, white + yellow = ANSI character set)

Printouts of the PDF files (Aachen\_BT.pdf, etc.) made by the Acrobat Reader should be neither enlarged nor reduced for comparison reasons.

The ASCII character sets contained in the 750 PDF files are typeset in **16 point**.

The short specimen texts (Leo, rex bestiarum, quod aegrotus erat...) are typeset in **11 point** so that you can decide whether the font selected can be used as text font for books and magazines.

If you want to have a closer look at a certain character, you may enlarge this character in Acrobat Reader to any desired size. See e.g. the enlargement of the Latin „et sign“ to the right:

## 2. Bitstream Classification

## 4. Addendum 1

The following 20 Bitstream fonts are contained in CorelDraw 9, but not included in CorelDraw 12. Corelcorp seems to have omitted to copy these fonts onto the CD of CorelDraw 12.

The font "Snell" is a duplicate font renamed to "Roundhand" in CorelDraw 12, but the other fonts of CorelDraw 9 are additional fonts which have – by mistake - not been included into CorelDraw 12. For instance, CorelDraw 12 does contain "Bauer Bodoni BT Black Italic", but it does not contain, by mistake, "Bauer Bodoni BT Black".

Font File	Font Menu Name	PS & PDF Font Style Name	Font Family Name	Corel

## 5. Addendum 2

The fonts by Bitstream and by URW feature complete ANSI 1252 Western Europe character sets, whereas the fonts by Corelcorp and by Letraset have defective, non-complete character sets.

The following 43 fonts (30 Letraset fonts + 12 Corelcorp fonts + 1 URW font) are contained in CorelDraw 9, but not included in CorelDraw 12. The Letraset and Corelcorp fonts have incomplete character sets (with many missing printer's specials: number sign, braces, double dagger, etc.), and the single URW font "Circle D" has no space character due to an internal encoding error.

The 6 PostScript fonts marked below by asterisk \* have proprietary "Bitstream" font encoding. Before using these fonts, you will have to restore the ordinary Western Europe encoding with the help of a font editing program.

## 6. Addendum 3: Symbol Fonts

All fonts described above are **alphabet fonts**. But CorelDraw also includes 65 non-alphabetical **symbol fonts** which are described below. The suffix **S** of the PDF file names denotes symbol font with Windows symbol font encoding: This means that the Unicode range hexadecimal F000-F0FF is mapped into the ANSI range hex. 0000-00FF (= decimal 0-255).

All 65 symbol fonts are contained in both CorelDraw 9 and 12. There exists one additional font, labeled „Keystroke“, which is only contained in CorelDraw 9 and marked below by an asterisk.

## 7. Addendum 4: WGL 95 Unicode Fonts

There are 33 special Bitstream Unicode fonts complying with Windows Glyph List 95 (WGL 95). These fonts are only available as TrueType fonts, not as PostScript Type 1 fonts.

The Bitstream Unicode fonts are usable since Windows 1995, i.e. with Windows 95, 98, 2000, XP. The character sets of these fonts comprising 660 characters each cover the following:

1. Pan-European code pages (Latin 1, Eastern Europe, Baltic, Turkish)
2. Modern Cyrillic
3. Modern Greek
4. DOS code pages (437, 850 etc.) and 437 pi chars
5. MacOS code pages (Roman and Central Europe)

These WGL 95 fonts are recommended, if you need **all** these characters (Latin, Cyrillic, Greek) in **one** typeface featuring the same style of design, e.g. in a mixed Latin-Cyrillic document.

1. AdLib Win95BT (TT1154C\_.TTF)
2. Baskerville Win95BT (TT0031C\_.TTF etc.)
3. CentSchbook Win95BT (TT0083C\_.TTF etc.)
4. Chianti Win95BT (TT1210C\_.TTF etc.)
5. Courier10 Win95BT (TT0419C\_.TTF etc.)
6. Dutch801 Rm Win95BT (TT0011C\_.TTF etc.)
7. FuturaBlack Win95BT (TT0206C\_.TTF)
8. Monospac821 Win95BT (TT0596C\_.TTF etc.)
9. OzHandicraft Win95BT (TT1178C\_.TTF)
10. PosterBodoni Win95BT (TT0129C\_.TTF)
11. Swis721 Win95BT (TT0003C\_.TTF etc.)
12. Zurich Blk Win95BT (TT0182C\_.TTF)
13. Zurich Win95BT (TT0178C\_.TTF etc.)

Above fonts include the additional font „Chianti“ not available as plain PostScript Type 1 font.

The PDF files are recognizable by the file name prefix „95“, e.g. „95\_AdLib\_BT.pdf“. Therefore, the infix „Win95“ was dropped in the PDF file names.

The Truetype file names are recognizable by the Bitstream font prefix „TT“.

## 8. List of all 750 PDF files

Suffixes: **BT** = Bitstream, **C** = CorelCorp, **L** = Letraset, **U** = URW; **S** = Symbol

**Note 1:** URW fonts can also be recognised by the final letters **D** = Display type and **T** = Text type

**Note 2:** Suffix **S** denotes symbol fonts (usually by CorelCorp., but also by Letraset and Bitstream)
